

MSI PATCH SHEET

N. S.C. (Gen1)

KESTRICTE!

EXECUTIVE OFFICE OF THE PRESIDENT NATIONAL SECURITY RESOURCES BOARD

WASHINGTON 25, D. C.

OFFICE OF THE CHAIRMAN

July 18, 1951

MEMORANDUM TO: The Chairman

SUBJECT: Projects which will necessitate the use of

fiscal year 1952 "special project" funds

Attached hereto is a listing of projects currently before the Board for action, which will require "special project" funds during fiscal year 1952. The projects listed are those which have been recommended either by the Board's staff or by other agencies as urgently needing early action.

With the rapidly changing world situation, and as a result of the current mobilization program, new problems constantly are arising so that it is neither possible nor desirable to fix a firm program at the beginning of the fiscal year to be followed without deviation. It is pointed out that the current listing inevitably will be supplemented as additional problems arise.

A preliminary estimate of the cost of the attached project list, based on recent experience with such activities, amounts to approximately \$720,000. The Board expects to defray \$300,000 of this expense if the budget proposal now before the Congress is approved. We will rely on other agencies; both public and private, to supplement the Board's outlay to the extent of \$420,000 in cash or personnel and other amming heart peut to the formation of the contract of the cont expenses applied to this work.

NATIONAL SECURITY RESOURCES BOARD

Projects Requiring Board Action

Which Will Necessitate the Use

of FY 1952 "Special Project" Funds

Material Resources Projects

- 1. Development of improved methods for estimating materials requirements from military and civilian end-item production schedules.
- Development of plans and programs for sustaining production in the United States in event of attack.
- 3. Development of programs for minimizing the vulnerability of American industry to enemy attack.
- his implyeds of wartime levels of civilian economic requirements.

Human Roudepead Projecte

- 5. Development of policies and programs for the mobilisation of women for civilian and military employment during war.
- 6. Development of improved methods for estimating wartime manpower requirements and resources, with particular reference to geographical areas and specific industries.
- 7. Study of special functions of employment services in war manapower programs.
- 8. Development of instruction methods of allocating skilled workers between military and civilian wartime requirements.
- Survey and analysis of critical wartime occupations for use in maintaining wartime policies and programs on a current, stand-by basis.
- 10. Development of housing construction policies and programs for supplying emergency housing and related facilities during war.

Page 1 of 2 RESTRICTED

THE PARTY OF THE P

Economie Analysis Projects

- 11. Study of the time phasing of stabilisation programs in full mobilisation and war.
- 12. Study of the shifts in income distribution in a war economy, for use in the development of both fiscal and stabilization policies and programs.
- 13. Analysis of the resource development of the Communist Bloc for use in estimating military potential, in studies of vulnerability and in developing progress of economic warfare.

Mote: A preliminary estimate of the cost of these projects amounts to \$770,000. If the Board's P.Y. 1952 budget proposal is approved, it is planned that it will fund these activities to the extent of \$300,000. Other participating public and private agencies will be called upon to contribute \$620,000 in funds or services.

The list is subject to change as the changing national security progrem gives rise to new problems which may have to be given precedence over those now before the Board for action.

Memo for Senior NSC Staff

October 24, 1951

Accordingly, the following changes are suggested on page 3:

(1) Insert the following sentence at the end of the first full paragraph:

*Basic values and aspirations of the Mohammedan religion are akin to those of the Christian religion, in contradistinction to the Communist denial of God, **

(2) Reword paragraph 2 a as follows:

a cooperative attitude towards the United States and its allies on the part of the states in the area through a psychological strategy which plans the integrated use of pertinent governmental actions, including technical, economic and military assistance, esychological effects, propaganda and information, political support wherever possible both within and without the United Nations, and public manifestation of United States interest in the area by means of official statements and official consultations on problems of mutual concern.

In developing such a strategy, the objectives of the United States should be presented as being principally in the interest of the Middle East countries themselves and should avoid public identification with the stereotype of imperial Britain. This essential point of view may need further emphasis in pages $3 \approx 8$ of the current draft.

October 23, 1951

Date 3-11-81 By DEFRILT

MEMORANDUM FOR THE SENIOR NSC STAFF

SUBJECT: Statement of Policy on the Position of the United States with respect to the General Area of the Eastern Mediterranean, Red Sea and Persian Gulf (October 5, 1951 draft).

The current draft, in dealing with psychological strategy, fails to express the sound concept set forth in paragraph 40 of the Staff Study (p. 35) that all pertinent political, economic, and social actions should be fused into a single, comprehensive policy.

The reference in paragraph 2 a of the current draft (p. 3) to "psychological efforts" appears to relate only to the use of information and propaganda services. These services are invaluable weapons and should be used as indicated.

But a valid appraisal of psychological strategy recognises that every significant action by our government in the political, military, and economic fields has its psychological effect, and it is the totality of these effects that influences the minds and wills of men. Accordingly, an effective cold war strategy seeks to integrate all such actions in an over-all planned use in order to gain the maximum impact and to obviate the chance of contradictory positions being assumed by different elements of government.

Such a strategy is especially important in the situation which exists in the regions under discussion, where military capabilities will be very limited and political, moral, and economic actions must be heavily relied on.

The Moslem world is currently responsive to Communist agitation. Mevertheless, basic values and aspirations of the Mohammedan religion are akin to those of the Christian religion, and the peoples of the area are spiritually anti-Communist. current paper should consider a judicious use of this religious orientation.

Mr. Stanton T. Friedman 79 Pembroke Crescent Fredericton, New Brunswick E3B 2VI Canada

Dear Mr. Friedman:

This is in response to your letter of November 7. There is no record in our files of a NSC meeting on July 16, 1954. There was a NSC meeting on July 15, 1954, and the NSC Series in Eisenhower's Papers as President contains the partially declassified minutes of this meeting (20 pages). There was a Cabinet meeting on July 16, 1954, and the Cabinet Series of Eisenhower's Papers as President contains the minutes of this meeting (5 pages). If you wish, you may order copies of these documents at \$.35 per page (\$5.00 minimum).

In regard to your request for copies of "personal services contracts" involving Lloyd V. Berkner, Detlev Bronk, Vannevar Bush, Jerome Hunsaker, and Donald H. Menzel, our staff has never seen any references to or copies of such documents in our files. We do have a very small quantity of correspondence involving Berkner, Bronk, and Menzel in such collections as the records of the President's Science Advisory Committee, the records of the President's Committee on Scientists and Engineers, and the records of the Office of the Special Assistant for Science and Technology. If you would like copies of the finding aids to these collections, please let us know.

Sincerely,

MARTIN M. TEASLEY
Assistant Director

THE AIR WAR

COLLEGE STUDIES

THE Air War College of the United States Air Force is the institution which is probably in the best position in the world to receive, discuss, evaluate, and disseminate thinking on air power. The College is engaged in a program of study, teaching, and research in matters of vital interest to a dynamic and progressive air force. Its student body, Graduate Study Group, faculty, and lecturers all are engaged in this enterprise. The College originates ideas and studies opinions, hypotheses, and concepts originating both within itself and from external sources. It synthesizes knowledge thus gained into doctrine and principles for the proper employment of air power.

We feel that it is our duty to extend the results of this thinking beyond our own walls. Ideally we should keep all United States Air Force officers informed of the best and the latest thinking on air power as expressed in the Air War College. Perhaps some day that ideal may be realized, but for the present, security restrictions and budget limitations force us to accept a much more modest program. We propose to select some of the most important documents and lectures, as they are produced at the Air War College, and make these available to a selected group of Air Force officers.

Our purpose in initating the Air War College Study series on even this modest scale is to advance knowledge of air power and to assist the development of doctrine generally throughout the United States Air Force.

R. C. WILSON Major General, USAF Commandant

FOREWORD

When, during the spring of 1953, the Air War College students read digests of their theses before the assembled college, one such presentation "brought down the house." The applause was in part appreciation for a piece of research well done and a general agreement with the findings; it was also an expression of exasperation, which feeling was fairly general, especially among airmen. This is the thesis upon which that presentation was based.

The basic paper was a study of our top-rung machinery for making grand strategy under President Truman and was completed just as a new administration was taking over. The Air War College was anxious to learn what progress had been made during the first year of the Eisenhower administration. It, therefore, asked "Tex" Little to write an addendum to his original thesis.

The two in combination are here published in the belief that the study should be made available to others.

The reader will not be satisfied, for the story is not complete. But he will be pleased to note real progress.

R. C. WILSON

INTRODUCTION

Y THE EDITOR

THE United States, at the conclusion of its "tumultuous demobilization" in 1945-46, found itself in a dilemma. As it contemplated its postwar posture among nations, it was torn between conflicting desire and duty.

There was a deep seated desire to be free of international responsibility. There was a persistent longing for "the good old days" of isolated security, when Britain did the worrying about "balance of power," and when the young United States enjoyed protection afforded by intervening seas upon which rode only friendly navies. But this protection was now gone—gone indeed long before those awesome events took place at Pearl Harbor, Hiroshima, and Bikini. Yet, despite the purport of those events, the nostalgic yearning persisted—affecting foreign policy.

There was at the same time a stabbing conscience which disturbingly said, "Get on with winning the peace! You must! This time you must!" And the young giant of the West, the "Arsenal of Democracy" in all that that term connotes, knew that it should be about its business of vigorously promoting freedom, justice, and socio-economic progress "everywhere in the world." Here too was a persistent force—a persistent call to duty.

Could this exasperating dilemma—this conflict between desire and duty—be resolved by compromise? Was there not some middle ground between isolationism and internationalism, some place where Uncle Sam might acknowledge his obligation to the Four Freedoms while following a policy of "live and let live"? Could he not buy some time while the dust of World War II settled? Would this not, after all, be the wisest course to follow?

Here public opinion divided; indeed, it fragmented. The people looked to Washington. And Washington looked back to the people. It always had. But now public opinion was

INTRODUCTION

They simply could not reach national decisions on international affairs because they did not know enough. This very dilemma created from among the people a school of neoisolationists who did express themselves. On the other hand, there were those who were convinced that a negative approach to international responsibility had never succeeded. "Compromise between conflicting desire and duty can be no more than an expedient," they contended, "a dangerous expedient."

This latter element of the people pointed more or less frantically at the specter of a militant, amoral Marxist-Leninist-Stalinism stalking Mother Earth. They pleaded with their fellow democrats to awaken to the true significance of Russian communism. "Temporizing on our part," this element of the people held, "can be but a show of weakness. The Russians are the greatest chess players on earth. In every move they make they are showing their appreciation of the idiom that an offense is the best defense. But this is no mere chess match; the stakes in this contest are the sum-total of all that we hold dear. What is your plan, Washington? Can you get off the purely defensive? What is your grand strategy? Who is making U.S. grand strategy anyway? The State Department? The Pentagon? The White House?"

The people as a whole still looked to Washington. And Washington looked back to the people.

Eventually, in July 1947, there appeared in Foreign Affairs an article by "X," entitled "Sources of Soviet Conduct." In this anonymous piece, the planning staff of the U.S. State Department appeared to be sending up a trial balloon. Yet here, for all its timorous appearance, was a pronouncement of what this State Department group thought should be United States foreign policy vis-a-vis the Soviet plan of action. We would "firmly contain" Russian communism until it should give up its ambitions and wither away. The people read reproductions of X's article in popular publications. Some raised eyebrows; others frowned; most shrugged and went about their chosen occupations.

At this point, had we space here to spare, a chronology of the Cold War, beginning prior to 1947, should be reviewed. The "ebbings and flowings" of the Communist movement would be shown. It quickly would be seen that like all other

tyrannical forces in history there were no ebbs—no retreats on any front—except before the use of physical force or the definite threat or ultimatum to employ violence.

In this chronology there would appear some red-letter dates. Among them would be those having to do with the Berlin Blockade, the Greek "guerrilla war," the Truman Doctrine, the retreat of Chiang Kai-shek, the Soviet action in the UN, the demise of freedom in Czechoslovakia, the Marshall Plan, NATO, EDC, the Korean War, and wars in Indo-China and Malaya. Scattered throughout would be items having to do with consolidation of Communist conquests in Central Europe and in Asia. The chronology would contain also the red-letter dates which designated the shocking announcements that Soviet scientists had exploded atom bombs and then a thermonuclear device.

These latter items, with the accompanying talk about "kilotons" and then "megatons" and "megadeaths," seemed for a time to have had a stunning effect upon American public opinion. All this—all these complications—all the various probabilities—all the horrible possibilities! The people looked to Washington. . . .

If there had developed an immediate postwar dilemma, it was all the more compounded now, for everything else was compounded. The United States was slowly but surely being forced against its will to take a stand—to plan carefully a mentation of that policy. The United States wanted just to strong foreign policy and to plan to be able to take quick violent action should such become necessary in the imple-"live and let live;" it found that that was no longer possible. It preferred to "muddle through" international problems; now it began to realize that it had been dragged into a diplomatic struggle of unprecedented significance. It had always loved the looseness of its democratic structure, and it wanted to remain "free and easy." Now, challenged by totalitarian rigid efficiency, it was being forced to centralize authority. Only thus could it move quickly and effectively to parry, to spar, to block, to counterattack.

Meantime, how much of a counterattack would the people stand for? How much was necessary? Just enough to continue to "firmly contain" as in the case of Korea? But then what of Indo-China where we were not very firmly containing? And what of the Red threat to Thailand and Burma and

fires" along the southern borders of the Red Heartland, and any of them could become as bloody an affair as had been the Malaya? One could count a full dozen prospective "brush indecisive Korean War.

When the diplomat, the statesman, the executive have been unable to prevent the war, they step saide (or should step saide) and let the soldiers handle the military situation in the field.

NEED FOR POLITICO-MILITARY POLICIES

ogical revolution, and with Kremlin theory and practice, two factors in the conduct of United States foreign affairs stand out in bold relief: diplomats can no longer ignore the miliatomic fission and fusion. Faced squarely with this technotary facts of life; and our military leaders, despite a strong tradition to the contrary, must henceforth assume their suddenly have undergone a drastic mutation produced by share of responsibility for diplomacy.2

The traditional American concept of a black-and-white distinction between peace and war was reflected in the organizational structure of our Federal Government in the early 1940's. There was no machinery for integration of only one overworked man who simply could not carry this great burden alone. In the early stages of World War II the diplomatic arm of the Government virtually abdicated its powers and responsibilities to the politically untrained military leaders. This failure to integrate politico-military policies was illustrated tragically at Yalta when the President, heeding an exclusively styptic military judgment, virpolitical and military considerations of grand strategy tually handed Eastern Asia to the Kremlin.

ectives."3 Can it be that our military leaders, of all people, that the Americans take Berlin before the Russians: "As ley in his memoirs had this to say of the British insistence soldiers we looked naively on this British inclination to comfailed to appreciate the true significance of Karl von Clausewitz's dictum (now trite) that war is the continuation of In 1945, as the war in Europe drew to a close, Soviet troops raced for Prague and Berlin, symbols of political prestige, while our highest military officers were loath to hazard American lives for purely political purposes. General Bradplicate the war with political foresight and nonmilitary obpolicy by other means? 4 This question is all the more pointed

Sherwood, op. cit., p. 780.

first two years of the Cold War (1945-1947) were ordained by the United States decision to fight the Germans in France instead of grabbing as much of Central and Eastern Europe as possible by an attack through the Balkans. Seeking simply to annihilate the enemy, we quite forgot that the purpose of war is to create a more tolerable and stable equilibrium in the world community than that which existed before resort to armed conflict had occurred. The basic fact is that the United States had no integrated political-military strategy during or at the end of World War II, and consequently has been forced to handle almost all the postwar problems on an ad hoc basis. Even the Marshall Plan was essentially an ad hoc solution for what we hoped would be a temporary problem.

each department of the Government—has contributed to ately disintegrated its military forces with almost no voice distinct. We realized, three or four years too late, our own all forms of human behavior are involved. The shadings beour failure to show a full understanding of the nature of inworld strategy into neat and separate packages—one for indefinitely. But, more important, our tendency to separate American position on world strategy can be cited almost The examples of a demonstrated lack of an integrated only be continued in different forms and with new power raised in protest. This was because we failed to understand naiveté at the end of World War II when the nation deliberternational conflict. Such conflict goes on continuously, and that after the defeat of the Axis the struggle would to achieve or to preserve power are becoming increasingly intween peace and war and the instruments used by nations

relationships.

It is not a strained concept to suggest that the existence of a well-trained group of politico-military strategists, properly a well-trained group of politico-military strategists, properly a well-trained group of politico-military strategists, properly a well-trained group of politicary the basic doctrine and more enlightenment, or at least the basic doctrine and knowledge which would have enabled a wise President to knowledge which would have enabled a wise President to knowledge which would have enabled a wise President to assert his historic role as both an awakener of public opinion assert his historic role as both an awakener of public opinion and an initiator of bold policies. Historically the nation's energy of the policy. The Conduct of Poreign Policy' in Aspects of American Government, London: The Hansard Society, 1950, p. 113.

organization for national defense has been so shackled in the grip of the past that only threat of grave catastrophe could release it. 10 The urgency of finding a solution to this problem was emphasized in the immediate postwar period by the cold facts of our responsibility for world leadership in a bipolar world. Victory awaited that side which should make the best use of its substance. A terrible defeat was the alternative.

It was to satisfy the crying need for a merger of political (including socio-economic factors) and military policies that the National Security Council (NSC) was brought into existence by the National Defense Act of 1947.

ORIGIN AND FUNCTION OF NSC

United States cabinet, in the kitchen cabinet, and in SWNCC. This latter, "State, War, Navy Coordinating Committee," was a World War II expedient which had proved itself under fire to be worthy of preservation.* Strengthened and elevated, this agency might indeed supplant the cabinet in the performance of one function—the formulation of foreign policy.

The "integration of domestic, foreign and military policies relating to National Security" is the stated purpose of NSC. These are the words of the act of Congress which brought NSC into existence. Actually the Council can be just a coordinating board or it can be an all-powerful grand-strategy planning sanctum sanctorum. That is for the President to say.

3. STRUCTURE AND

OPERATING PROCEDURE

THE organization structure and functions of Mr. Truman's the President, as chairman, the Vice-President, the Secretary NSC are shown in Chart 1. The membership consists of curity, the Chairman of the National Security Resources Board, and other secretaries and under secretaries of departthe Senate. It is to be noted that the Central Intelligence headed by the Executive Secretary of the Council, functions by the working group, they are normally ratified by the Council at a regular meeting; otherwise the Council may of State, the Secretary of Defense, the Director of Mutual Sements when appointed by the President and confirmed by are two important organizations which are directly subordinate to the National Security Council. The Senior NSC Staff, to coordinate the development of an integrated working cies concerned. To the extent that agreements are reached attempt to resolve disagreements. Failing in this, the case Agency (CIA) and the Psychological Strategy Board (PSB) group position on the basis of the views of the various agengoes to the President for decision.

The members of the Senior NSC Staff are themselves the designated representatives of the several members of the Council, so that the members of the Senior Staff are the alternates (on the working level) of the legal members of the Council. Members of the Senior Staff serve NSC as an "additional duty." They owe their primary loyalty to their own departments or agencies—not to the NSC. The full-time staff hired by and working for the NSC is relatively small and overshadowed by the partisans of the departments. The personnel resources of the Council are limited, both as to the number of full-time people available and as to the direct in-

terest and authority of the part-time workers to function as a true National Staff.

The first Executive Secretary of the Council, Mr. Sidney Souers, felt that he should "never take sides on any policy issue, since this would jeopardize his role as a neutral coordinator." The modus operandi was to "keep the subject under discussion until the disputes are resolved." These operating methods continued under President Truman without substantial change. This no dobut insures full consideration of all possible viewpoints, but it also stagnates the decision-making process except where the President personally steps in. A policy decision taken without adequate discussion and consideration can hurt grievously; but it is equally wrong, especially for a nation looked to for world leadership, to lose situations by default of any policy. The latter has been more damaging than the former in the peace efforts of this nation during the past decade.

examination of some of the organizational arrangements of peace must be judged in the light of today's situation of the NSC and how these affect its ability to accomplish its alldomination. With this requirement we may turn to an U.S.S.R. with a completely integrated ideology bent on world Cold War (with at least one "hot spot") waged by the history, and the effectiveness of its organization to win the heretofore neglected field. In any event, the problems facing strategy, but on the fact that it has functioned at all in this important job. America today are more demanding than at any time in any previous organization established for the same purpose not in terms of how well it has integrated politico-military process the country has ever had."13 Its merit is judged It is probably the "most orderly and effective policy-making There is no doubt that the NSC has worked better than

4. A FUNDAMENTAL PROBLEM

ally (to his own satisfaction). Even after "decisions" are several departments conscious of their responsibility for na-"action" departments. This has the virtue of making the the perfunctory requirement of a status report from the system of follow-up used by the staff of the NSC is limited to the Departments of State and Defense. The current (1952) of what is to be done about them. Some of the problems cited reached by the Council, each agency is largely its own judge hold back problems or issues that he can dispose of unilaterso many other demands on his time that the Council has has yet been cloaked with real authority. tional unity through NSC. But it does not mean that NSC been without a real full-time boss. Without strong full-time But in actual operation its chairman, the President, has had ture. That is, authority is vested in the group as a whole. later in this paper will illustrate unilateral action by both leadership, each department representative on NSC tends to THERE is a basic and fundamental problem facing the Na L tional Security Council. It is, in fact, a collegiate struc-

The typically American tendency of high officials to regard their prime responsibility as performance of their own narrow function—at whatever cost to the over-all objectives of the nation—has been evident in the NSC. The system of departmentalism in the United States Government is so embedded that department heads tend to feel no accountability for over-all policy on activities affecting other departments. A Such segmentation of interest is frequently in conflict with the President's responsibility for the whole public interest. This conflict is all the more dangerous in the absence of strong leadership from the President. It is the contention of some writers that the "lack of intellectual leader
11-POT excellent discussion of this point, see: Herman Miles Somers. Presidential Agency. Cambridge: Harvard University Press, 1950, p. 215.

interests to overriding national interests must be found. This weakness of the U.S. cabinet system (as contrasted with the ship" by President Truman has left the Council "in desperate not this charge is fully justified it appears to be a fact that there is a fundamental problem in NSC which is yet to be resolved. Some method of subordinating selfish department need of compelling, farsighted leadership."15 Whether or British system) should not be perpetuated in the promising

NATIONAL STRATEGY 5. THE VOICE OF THE MILITARY IN

That the views of the nation's top military men should L have weight in strategic decisions of the NSC is without question. The military plans of the JCS must be designed to execute the military aspects of the over-all strategic policies and programs formulated by the NSC. Conversely, national policies and indeed the whole posture of the nation's foreign programs must reflect military strength in the appropriate

Just what that military strength is, or what it must be to which should be answered by our top military chiefs. There expression of service bias before NSC for its decision as to offset a prospective enemy's military strength, is a question is one viewpoint that their answer should be unanimous. In involve compromise so "watered down" that weakness is bound to result. This opposing viewpoint would call for full opposition is the viewpoint that unanimity here might well which of several alternatives should be implemented.

NSC is faulty. Neither its representatives on the Senior NSC Meantime, the problem exists, and JCS representation in Staff nor the Chairman himself (as able individuals as they may be personally) can speak for and fully commit this

8. THE PSYCHOLOGICAL STRATEGY BOARD

I the Soviets is in two parts: to conduct a cold war, and to President Eisenhower [just inaugurated.—Ed.], have contended that the Cold War properly conducted is a "chance to gain a victory without casualties, to win a contest that can quite literally save the peace."24 It has been contended that adapted to a cold-war strategy that is unified and coherent.28 THE current [January, 1953—Ed.] national effort vis-a-vis prepare for a general war. Responsible officials, including the Cold War, now upon us, holds our fate perhaps even more than the shooting war everyone dreads.25 But for a chance of success in the Cold War, our foreign policy must be

In an effort to achieve coordination of the disparate resources of the departments and agencies responsible for various psychological operations, the Psychological Strategy Board (PSB) was created by executive directive of 4 April 1951. In simple terms the PSB was to be a sort of general staff to plan and supervise the conduct of the cold war,

stro New York Times, December 7, 1952, p. 51.
stron New York Times, January 11, 1953, p. 1.

ment could provide the coordination and guidance for the efforts that had sprung up in several departments of the eaving to the Pentagon the responsibility for plans and preparations for a general war. One of the basic reasons for creating the Board was that no other point in the Govern-Government to imitate the Soviets by use of psychological and other forms of unorthodox warfare in support of our national policies.

The PSB consists of the Undersecretary of State, the Undersecretary of Defense, and the Director of the Central Intelligence Agency (CIA), and operates under a staff director Within the Departments of State and Defense and in the CIA are staff elements to backstop and support the members of the PSB when wearing their PSB hats as distinguished from those related to their normal duties. The concept of the membership of the Board was that its members would be men who enjoyed such prestige that the operating agencies mandatory. This was justified on the basis that the major psychological operations are conducted by either the De-CIA), constitute the membership of the Board. But prestige who is responsible for the day-by-day work of the Board. would consider guidance approved by the Board as being the undersecretaries of which (or the director in the case of alone has not been enough. Nobody on the Board is satisfied that the job is being done as effectively as it might if a fulltime staff were concentrating on it under the direction of a competent chief with direct access to the Chief Executive. 27 partment of State, the Department of Defense, or the CIA,

The original concept was that the PSB would start where the NSC left off, the former promulgating broad national to do its job, the PSB must either substitute its own policies or stagnate. In practice it is difficult to distinguish between the actual functions of the two agencies. This similarity is warfare problems being considered by NSC or the PSB; the policies and the latter adopting specific objectives, lines of action, and programs. To the extent that the NSC has failed supported by the fact that, for the most part, the same officials of State, Defense, or CIA deal with the psychologicalof the PSB (cold war) is such that specific programs and latter is, in effect, another echelon concerned with part of the over-all problem. And the nature of the primary problem 17 Thid., p. 53, col. 2.

lines of action can only be adopted within the framework of definite national objectives and policies which are the responsibility of the NSC.

cepts, and plans in consonance with the foreign policies and operations" in the psychological-warfare field than it is to do tation to get closer to "operations" at the expense of the the staff grew, and especially after Gray resigned to resume start and initially confined itself to its primary tasks. As the former Secretary of the Army, the Board got off to a good logical warfare effort. Under its first director, Gordon Gray operating agencies) and to evaluating the national psychological operations (which were to be conducted by other ordinating, and promulgating national guidance for psychocate the guns and "ammo" of the cold war and to let others the military posture of the nation. The current director of the mean, tough job of forging out realistic doctrine, conthe best of the staff. It is much more interesting to "run formulating basic psychological programs, seemed to get more difficult mundane job of digging out, weighing, and the presidency of the University of North Carolina, the tempthe PSB has a real job to force his staff to develop and allo-'pull the triggers." The directive creating the PSB limited it to planning, co-

The Board soon experienced some of the same difficulties as the NSC in getting its "decisions" executed. Although the Undersecretary of Defense is a member of the PSB, the JCS does not feel bound to accept decisions of the Board that are "military in nature." The JCS has been jealous in guarding its exclusive channel of command to the overseas theater commanders, so that decisions of the Board that may require the attention or action of theater commanders must be reconsidered de novo by the JCS. Small wonder that Washington is full of overworked staff officers busily preparing the "position" of their agency on matters that have been "decided" weeks before.

SOME DEFECTS OF THE NSC

In the essential fact is that the NSC, which is the key agency in the entire security structure for the United States, has not fully accomplished its purpose. It has undoubtedly been of value in achieving politico-military integration in contrast to the dearth of integration prior to 1947. But its accomplishments are largely limited to dealing with matters of immediate urgency, and it has not provided the operating departments with comprehensive guidance in the form of clear statements of current or long-range policies. As a result, the President is seriously handicapped in carrying out his responsibilities to recommend a balanced and comprehensive security program to Congress and the people. 29

An example of failure to attain a single strategic position for the nation concerns our relations with Formosa. In 1948, as a result of events on the mainland of China, the JCS decided that Formosa was of strategic importance to the United States. 30 But there were no available troops to defend the island, so the JCS told the State Department that Formosa must be held by diplomatic means until troops could be made available. The State Department was unwilling to commit United States prestige to the defense of Formosa because it was too obvious that any strong diplomatic language designed to keep the Chinese Communists out of Formosa was to bluff. 31 So the world's most modern nation floundered along for months without any machinery to resolve its policies and strategies on what, in terms of world affairs, should not have been among its more difficult problems.

The NSC has given attention to the need for increasing

10. ORGANIZATIONAL STRUCTURE OF THE NSC

results. On the other hand, a clear-cut plan of organization can make a hard job easier and, more to the point here, a seemingly hopeless job capable of a degree of direction and control otherwise impossible. On the question of the relative importance of good organization or good people, former Secretary of the Interior Ickes is credited with the best quote: "having both you can't miss - -; with only one you are seriously handicapped - - -; without either - - God help you." The caliber of personnel of an organization and a large measure of the organization's effectiveness must reflect leadership. This is especially true of the NSC. From the White House must come the spark of interest, intellectual leadership, and drive that will create an atmosphere of action in which vital decisions can be made and executed.

Apart from intellectual leadership there is a real requirement for the clarification of the purpose, functions, and the internal structure and operating procedures of the NSC. It is almost universally recognized that James S. Lay, Jr., the present Executive Secretary of the NSC, has done a fine job within the framework of his currently prescribed duties. Keeping the interested parties informed of the workings of the Council and coordinating the papers that flow in and out of the Senior Staff are extremely important. But the machinery should be strengthened so that the best possible brains are put on the most vital issues—so that decisions are made after fullest consideration of all factors. Equally important, once decisions are made, there should be adequate follow-up and enforcement to ensure that every segment of

34Harold L. Ickes, Plan of Organization, Organization Manual, Petroleum Administrator for Was. Washington: Government Printing Office, 1943.

the Government supports national doctrine and policies.

and changing the title of its Executive Secretary. Because of from the JCS and the PSB by enlarging the responsibilities or man, other than the President himself, should be in comthe wide range of functions of the NSC, no single department existing system is required to pull together and integrate plete control. But an arrangement more effective than the and evaluate on the broadest possible level the over-all tions in the name of the President, and continually to assess conflicting interests, to follow up decisions and required acforeign and military policies of the Government. On organizational concepts the NSC could well take a page

The planning function might be accom-The major job of the NSC Staff is planning on the national level, that is, the formulation of national objectives, plished by organizing the NSC Staff into two major groups. building's foundation.

Once long-range national objectives and strategies are formulated and approved by the Council, intermediate objectives are adopted; and strategic moves to attain them are set in motion and continuously followed. At this point the Plans and Programs Group should take the initiative. The bulk of the PSB staff, supplemented by strength on the military side, might well fit into this group whose main job

it would be to transpose the broad language of national objectives and strategy into realistic guidance, devoid of abstractions and generalities, which will control the operating departments and agencies. Closely related to, if not a part of this Group, should be the follow-up function—a sine quanon to effective performance.

Additional details as to the composition, size, and operating methods of the NSC Staff are beyond the scope of this paper. It is clear that full-time effort should replace some of the part-time arrangements now in effect. Strong direction and follow-up, within approved policies, rather than coordination among the departments, should set the tone of the Staff Director and his staff. To accomplish these duties the strength of the NSC Staff must be increased both in quality and quantity. But the strengthening of the NSC Staff should not result in another echelon between the President and the actual points of operation. Rather, there should be less layering and certainly no increase in total personnel concerned with these matters.

of writing great volumes of staff papers on the "position" of their office vis-a-vis a particular problem, they may now turn attention to the position of the United States Government as a whole on the same matters. Washington has seen too many staff papers representing the position of a particular agency or office on a particular problem and too few staff papers outlining the over-all posture of the United States Government. Of course, the latter are infinitely more difficult to produce, but this difficulty is rarely lessened by in-The NSC Staff should consolidate under a manageable other departments—that under present conditions are working hard on the functions that can more effectively be handled at the NSC level. The difference will be that instead arrangement the many and diverse staff elements—some of which are now deep in the bowels of State, Defense, and creasing the volume of papers of the former type.

The proposal to create the position of Staff Director of the NSC and to give him the means and authority to make the Council a more useful tool of the President is no doubt subject to the familiar objection that too much authority is given to one man. The same arguments raised against the creation of the General Staff of the Army in 1903 will no doubt be raised against this proposal. In fact the arguments

sary for its staff to duplicate and in some cases substitute its efforts for the vacuum left by lack of action or decision by the NSC. This was necessary in order for the PSB staff to form a basis for further development of policies and programs in the psychological-warfare field. Thus, the actual work of the two agencies is at least partially merged in practice, although the organizational chart (Chart 1) clearly shows the PSB as separate from the NSC.

personnel. etc., which seem to require such a high proportion of the of the PSB (such as space, personnel, external relationships, the extent that administrative and housekeeping functions of the PSB can be made on the basis of detailed studies of cold-war efforts. It follows that the PSB might well be abolmerger should result in an increase in efficiency with less time of Washington executives) are duplicated in the NSC, the requirements for the revitalized NSC Staff. Obviously, to as to the assignment and use of the present staff personnel ished and its functions assumed by the NSC. Adjustments tional staff, the same is not true as to a separate staff for tary staff may be justifiably separate from the over-all nahighest levels of the Government.38 While a national millthe nation's objectives and should be directed from the up, cold-war operations are the primary methods of attaining Especially during a period of conventional military build-

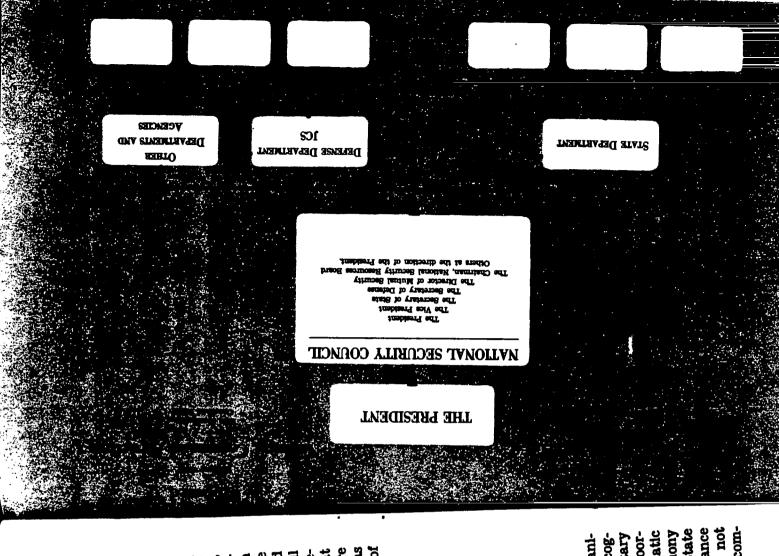

The total job of formulating national objectives, strategies, and policies can be done better and cheaper by locating it at the level of decision, and by merging all staff elements of the entire Government concerned with such matters with the clear mandate that once decisions are made the approved programs will be executed without the mass of "position papers" for each affected agency with which Washington is now afflicted. The statutory position of the NSC puts it in a better position to get its decisions accepted by the military than did the Executive Order status of the PSB which, as we have seen, tends to be ignored by the JCS in cases of disagreement.

The history of the creation of the PSB is a good illustration of why so many boards, commissions, ad hoc committees, etc., exist in Washington. The basic defect was the lack "Pror an interesting discussion of this point, see James Burnham, The Coming Defeat of Communism. New York: John Day, 1850, p. 243, ff.

recognized in General Eisenhower's San Francisco speech of rior—the NSC. In any event the nature of the decisions that must be taken by the Nation's cold-war general staff are such that direct access to the President is required. This was commit his agency but properly he has been hesitant to fill in blank policies which are the responsibility of his supenormal duties of the departments as are their chiefs. The Director of CIA is, of course, in a position to act for and making level, and their time is almost as fully occupied with part of the job in which they were most interested. But the substitution of the Under Secretaries of State and Defense for the Director of the CIA as a member carry no magic. Indeed, they comprised one step further removed from the decisionapproval for creation of an additional agency to do that the secretaries of those departments, and the addition of effort. Being unable to get action at the NSC level, the agencies most concerned with the problem proposed and secured need for guidance and evaluation of the national cold-war of performance on the part of the NSC. 15. SUMMARY

eign policy has been the lack of coordination of political, economic, psychological, and military policies. We fought two world wars without giving much thought to the relation between the kind of military victory we were planning to win between the kind of military victory we were planning to win the political settlement that would follow. In the latest and the political settlement that would follow. In the latest and the wars a war of movement, our concentration on one, which was a war of movement, our concentration on purely military objectives did help to win the wars quickly, purely military objectives did help to win the wars quickly, and thoroughly. But this military efficiency was cheaply, and the expense of larger postwar considerations.

Under modern conditions military questions are so interwoven with economic, political, and social phenomena that it is doubtful that a purely military strategy exists. In recent years we have come to realize that only over-all guidance can coordinate global war. For such war is fought as ance can coordinate global war for such war is fought as bitterly in the realm of ideas, and in the field of economics, bitterly in underground activity, as it is in the actual clash of and in underground activity, as it is in the actual clash of ments in Washington, there is no adequate national staff to integrate all national policies into a single grand strategy

The NSC, created in 1947 in recognition of the need for integration of political and military policies of the nation, integration of political and military policies of the nation, has functioned better than any previous organization dehas functioned at all sets it signed for this purpose. That it has functioned at all sets it signed for the purpose. Its accomplishments are largely apart from earlier efforts. Its accomplishments are largely apart from earlier of immediate urgency rather than in dealing with matters of immediate urgency rather than in the provision of comprehensive and definite guidance. This is largely due to three factors: 1) the collegiate structure of the Council; 2) the absence of full-time aggressive leadership; and 3) the lack of adequate follow-up procedure. The procedures followed by the Executive Secretary of the

Council are designed to insure full consideration of all possible viewpoints. But at this writing it is to be observed that consideration does not mean decision. At the NSC level, decisions are normally taken only by unanimous agreement of the council members or they are not taken at all. Policy decisions taken without adequate consideration may hurt grievously, but it is equally wrong, especially for a nation looked to for world leadership, to lose ground by default. There is no excuse for pure negligence—for failing to produce an adequate national policy or program to meet international issues.

The Psychological Strategy Board was established as a general staff for direction of the cold war. In its present form the PSB is one step further removed from the President than is the NSC. The decisions made by the nation's cold-war general staff must be taken at the highest level of the Government. It is the conviction of this observer that the PSB should be abolished and its functions transferred to a revitalized and reinforced NSC.

The effectiveness of the NSC can be improved by strengthening and increasing the authority of the NSC Staff. It must be able to achieve decisions on a timely basis that are not so watered down by compromise as to be worthless as guidance to the operating departments and agencies. The NSC Staff Director should function as a direct assistant to the President. Within the framework of approved policies, he should monitor the President's chains of command to the overseas stations (military and diplomatic) to insure consonance between the political posture of the nation and its military capabilities. He should actively follow up on the "action" departments, to insure that policies and programs are being executed, and to evaluate the results achieved against national objectives.

As this paper is completed (mid-January 1953) there is no doubt that the nation's newly elected leader is thoroughly aware of the nature of the conflict in which we are engaged in the second half of the twentieth century. There is an indication that he realizes the necessity for decisive coordinated action on the part of the United States. General Eisenhower's San Francisco speech of 8 October 1952 called for a revitalized National Security Council to develop a unified and coherent cold-war strategy. The able Robert Cutler, who

assisted in writing the San Francisco speech (against a background of frustrating experiences as the Deputy Director of the PSB Staff), has been announced as one of the White House administrative assistants in the new administration. Out of General Eisenhower's own experience at toplevel command should spring a new expression of appreciation for the necessity for timely decisions and guidance to the operating agencies, as the new administration, civilian and military, moves toward the making of grand strategy.

It pointed up

The major recommendations in the basic paper were:

a. To revitalize the NSC; to strengthen the NSC Staff and create the position of NSC Staff Director with direct across to the President and with responsibility and authority to make the Council a more useful tool of the President.

b. To strengthen the decision-making process of the NSCthe Strategy Group of the NSC Staff.

c. To strengthen the implementation and follow-up procedures of NSC and to transfer the Phychological Strategy Board to the NSC Staff as part of its Plans and Program Group.

d. To clarify the chain of command from the President to our foreign, diplomatic, and military posts.

The progress made during the first year of the Eisenhower administration toward satisfying the needs pointed up in these recommendations is discussed seriatim below.

[The author modestly falls to note that a copy of the basic paper was made availe to a member of the White House secretariat in early February 1933.—Ed.]

1. REVITALIZATION OF THE NSC

development of national security policies has been one of the significant features of President Eisenhower's first year in office. Not only have the procedures of the National Security Council been revamped, but the active interest and participation of the President as chairman of the NSC meetings and his reliance on this body as one of his primary tools has set the tone for interest and participation by the heads of the member departments and agencies. The Vice-President is assuming a significant role in the work of the Council. There is a current standing rule that all members and each advisor to the NSC will attend the weekly meetings in person. Presidential clearance is required for any substitution.

In addition to the statutory members, i.e. the President, the Vice President, the Secretaries of State and Defense, plus the Director of Foreign Operations Administration (who supersedes the old Director of Mutual Security), and the Director of Defense Mobilization (who supersedes the old Chairman of the National Security Resources Board), one important—very important—voice has been added to NSC deliberations. It is that of the Secretary of the Treasury who has been added as a "permanent-request" member of the council.

The President's cabinet, already somewhat shorn of its responsibilities in foreign affairs, surrendered nearly all remnants in this area to the seven-man NSC.

In this shift in responsibility there have been made some significant changes in the organizational structure of the White House strategy-making machinery. These are discussed

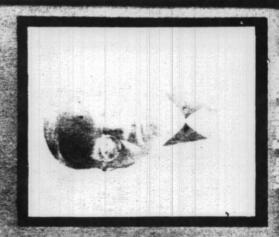

Immediately it must be noted, as it was in the basic paper,

that organizational structure is one thing; the personalities of those who fill "T/O slots" is another. It is not the purpose of this paper to attempt to characterize the individuals involved, but some mention of personality traits is inescapable.

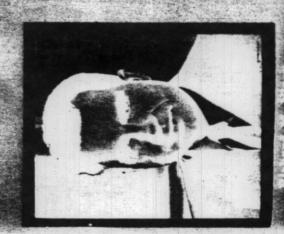

The dominating contagion of the Eisenhower personality has supplied a type of leadership to the Council that had been missing before. The President's knowledge of how to create and use a staff has been a major factor in the revitalization of the National Security Council. The firm but pleasant Eisenhower, who welded the diverse national and service interests at SHAPE into a functioning unit, has met a similar challenge in the NSC. How well he is succeeding in this task will have an important bearing on the future, not only of this nation, but of western civilization itself.

The problem of diverse interests of the member departments of the NSC has not, and perhaps never can be completely resolved, but it is being subordinated to wider considerations. This is due in part to the President's leadership, but also to the ground rules which the NSC obviously has adopted for the guidance of its own members. Under these rules members of the Council are advisors to the President in their own personal right rather than as representatives of their respective departments or agencies. These members are enjoined to seek statesmanlike solutions rather than compromises of departmental positions. The Council obviously has likewise imposed or urged the same ground rules upon its subordinate or advisory agencies such as the Planning Board of NSC, the new Operations Coordinating Board, and the Joint Chiefs of Staff.

2. STRENGTHENING OF THE NSC STAFF

GIGNIFICANT steps were taken in 1953 toward the creation of a true National Staff as a part of the NSC organization. The recommended position of NSC Staff Director has in effect been created. Specifically the title given to this director is Special Assistant to the President for National Security Affairs. This, in fact, denotes a position of even higher prestige and strength than that proposed in the basic paper.

Again, it is worth noting not only the position but the personality of the incumbent. The President appointed to this key job Robert Cutler, a Boston lawyer-banker. This able man, who had risen to the rank of Brigadier General during wartime service, is a charming, vigorous bachelor who devotes full time to his job. As a key member of the White House official family, he has constant direct access to the President, and apparently enjoys the latter's complete confidence.

The Special Assistant to the President for National Security Affairs is the NSC's executive officer. He is also Chairman of the highly important Planning Board which replaced the old Senior NSC Staff. He personally briefs the President. With the latter's approval he fixes the agenda of the Council meetings. He does not preside at any Council meeting, but he sits at the apex of the machinery of the Council, just beneath the Council itself. There he is in a position to influence strongly both the policy-making process (as Chairman of the Planning Board) and the progress of implementation of policies (by receiving the reports of the Operations Coordinating Board). In addition he supervises (but is not a member of) the permanent staff of the NSC under the Executive Secretary.

James S. Lay, Jr., who served as Executive Secretary of the NSC under President Truman, has been continued with the

same title under the new administration. Mr. Lay and his small staff, the Office of the Executive Secretary, have become the permanent secretariat of the Council. They, unlike the members of the Planning Board, are civil service employees and are unaffected by change in administration. The duties of this secretariat are just what the term implies: it assists the NSC to do its work by assuming responsibility for office facilities, internal budgets and personnel matters. It does not try to make policies; it is an important part of the machinery used by the Planning Board and the Council in policy formulation. The important job of processing the papers (agenda, records of action, status reports, etc.) which are the life-blood of the work of the NSC falls squarely upon the Executive Secretary to the Council. He is the official channel of communications for the NSC.

The Planning Board and The Office of the Executive Secretary are the principal elements of the Council's internal organization. (See Chart No. 3.) In addition to certain advisory committees, the machinery of the Council includes:

a. The Joint Chiefs of Staff as the principal military advisors.

b. The Central Intelligence Agency as the intelligence ad-

c. The Operations Coordinating Board (OCB) which re-

ports to the Council on the "integrated implementation of national security policies."

d. The U.S. Information Agency which reports to the NSC (or in accordance with the President's specific directives).

As regards the recommendations in the basic paper for organization of the NSC Staff into two main elements, it is clear that the functions of the Planning Board follow closely those suggested for the Strategy Group. There is no clear counterpart to the recommended Plans and Program Group, although the functions of the OCB are developing along similar lines. This development is discussed below under the heading, "Implementation of National Security Policies."

3. THE PLANNING BOARD IN THE PROCESS OF DECISION-MAKING

I step in strengthening the decision-making process of the NSC. The duties of the Planning Board include the advance spadework for the development of appropriate NSC policies in draft form for consideration by the Council. As in the Council itself, the problem of diverse interest of the member departments is under reasonable control in the Board. The members of the Board are nominated by the heads of the member departments or agencies of the NSC, but the appointment to the Board is made by the President. This tends to direct the primary loyalties, not to the separate departments, but to the over-all national interest in the form of the NSC. Members of the Planning Board are usually on the Assistant Secretary level of authority.

The work of the Planning Board is the principal duty of its members. No other duty may interfere. Nevertheless, one of the obvious ground rules for the nomination and appointment of a Planning Board member is that he shall have the personal confidence of the head of the member department or agency and the authority of such head to use its resources to perform appropriate board functions. In addition, the Board member must have an unbreakable engagement to brief the head of his department or agency before every Council meeting as to the background of the problems that will appear on the agenda.

Instead of the old Senior NSC Staff method of "keeping the subject under discussion until the disputes are resolved" the new system calls for a full and earnest exchange of conflicting opinions subject to the overriding objective of producing a truly national policy. Conflicting viewpoints are

56

WHITE HOUSE STRATEGY-MAKING MACHINERY

world issues with an attitude of decision. This usually rethe discussion of the alternatives, agreement often comes The philosophy of the new NSC is to face up to the major number of alternatives, or certain unresolved points may be included in papers that go to the NSC for discussion. Out of sults in elimination or at least reconciliation of conflicting not necessarily submerged or eliminated. Under current practice, the Planning Board may present the NSC with a on one or a combination of such policies or courses of action. points of view.

The Special Assistant would One of the prescribed duties of the President's Special Assistant for National Security Affairs, in his capacity of executive officer of the NSC, is to bring to the attention of

IMPLEMENTATION OF SECURITY POLICIES

level. This prescribed procedure seems to give the Council's impossible to expedite performance at the Planning Board executive officer sufficient authority to inspect, require reports, and to follow up the execution of approved policies. The machinery of follow-up is beginning to function, but it has not been in effect long enough to permit a complete evaluation of its effectiveness.

propriate departments and agencies. In cases where more dent's approval of an NSC proposed policy are directives for implementation of that policy. These are forwarded to apthan one agency is concerned (the majority of cases), the Included with the document announcement of the Presi-President designates a coordinating agency which is responsible for: (1) notifying all departments of the actions for ting Board established by Executive Order No. 10483, is which each is responsible; (2) insuring that such actions are taken in a coordinated manner; and (3) transmitting progress reports on implementation. The Operations Coordinanormally designated as this coordinating agency. The primary purpose of the Board is to "insure coordinated implementation of national security policies." For policies assigned for coordination, the Board is directed to advise with the departments and agencies concerned as to operational planaspects of such plans, and their execution in such manner jectives. In addition, the Board may initiate new proposals ning responsibilities, the coordination of interdepartmental as to make the fullest contribution to national security obfor action in appropriate circumstances.

The membership of the Operations Coordinating Board is Secretary of Defense; the Director of the Foreign Operations as follows: Under-Secretary of State, chairman; the Deputy Administration; the Director of Central Intelligence; and a the "President's assistant for Cold War." Although the representative of the President. The latter official, C. D. Jackson (former editor of Fortune), is known in Washington as Board normally reports to the President through the NSC machinery, Mr. Jackson's membership thereon provides direct access to the Chief Executive in appropriate cases.*

Of great importance to the functioning of the Board in recent months is its executive officer, a position occupied by *!Mr. Jackson resigned his post on the White House staff in early March 1954. No successor had been appointed as this went to press.—Ed.]

Elmer Staats, formerly with the Bureau of the Budget. Within a short time after Staats' arrival in November 1953, there was a discernible improvement in the functioning of the Board's internal machinery. He has been largely responsible for the orderly development of the procedures to make the Board an effective instrument.

The executive order establishing the Operations Coordinating Board also abolished the old Psychological Strategy Board and directed the former to wind up the outstanding affairs of the latter. The effect of this order was to transfer the personnel, files, and other assets of the PSB to the OCB. Initially the operating procedures of the OCB followed the panel system of the PSB whereby representatives of the several agencies met periodically to produce additional papers which duplicated, at least in part, the national intelligence estimates as well as some of the staff studies of the Planning Board of the NSC. By December 1953, however, the OCB had adopted its own internal operating procedures pointed more directly at its job of "integrated implementation" of national security policies.

of representatives of the affected agencies. Normally the cedure provides for the appointment of a "Working Group" nates the OCB as the coordinating agency, the current proof the several working groups as they proceed toward imple-OCB. These specify the jobs single department. The number and duration of meetings of as require unusual or nonroutine development beyond a such inter-agency coordination and reporting on NSC policies working group is the mechanism through which is conducted NSC policies remains with the agencies concerned. The that the responsibility for operations implementing these method of doing business. tacts between members being encouraged as the normal the working groups are held to a minimum, informal con-For each of the NSC papers wherein the President design

The reason for the establishment of the working groups, then, was to make clear which agency had what responsibili-

ties under the concerned NSC policy. Each working group seeks "completeness of and mutual support among the agency programs developed in response to such responsibilities and the timely and coordinated execution of such programs in such manner as to make the fullest contribution to national security." The working groups are apparently intended to be the channel of operational reporting by the responsible agencies on the status, manner, and degree of implementation of NSC policies. The OCB then consolidates such reports and transmits them to the NSC at appropriate times.

The OCB has made a good start toward accomplishing its purposes. Its membership, at the undersecretary level, is appropriate to its function of "implementation" in contrast to top- level membership of the NSC which is responsible for "policy making." Its standard instructions for working groups is a significant advance over the old panel system of the PSB.

But the working group can hardly insure "completeness of and mutual support among agency operational programs" in the absence of some over-all framework in the form of an outline of a "National Plan" into which document each agency can set forth its programs of action. Development of such an outline is distinct from the job of the Planning Board of the NSC (which is concerned with the development of policy). Rather the compilation of such an outline would be the responsibility of OCB (which is concerned with implementation of policy). This national plan would be quite distinct from a summary of national policy. It would in effect be a broad outline of planned procedures for carrying out the sum-total of national policy.

Admittedly the compiling of such a master plan would be quite difficult. Yet such is badly needed; and the continuous revision of such a national plan would also be needed. This process of continuous revision would be of primary assistance in limiting overlap and duplication and in filling in gaps. With a coversheet produced by the OCB, using the plans of the member agencies as tabs, the resultant document would be a "national plan of action" for a specific period of time (preferably a fiscal year).

The national plan would provide a proper basis against which the "mutual support among agency operational pro-

grams" could be judged. Such a document would eliminate many of the ad hoc procedures and provide for a more complete utilization of national assets. This might also facilitate the development of a national command post for the President as suggested in the basic paper.

6. SYNOPSIS

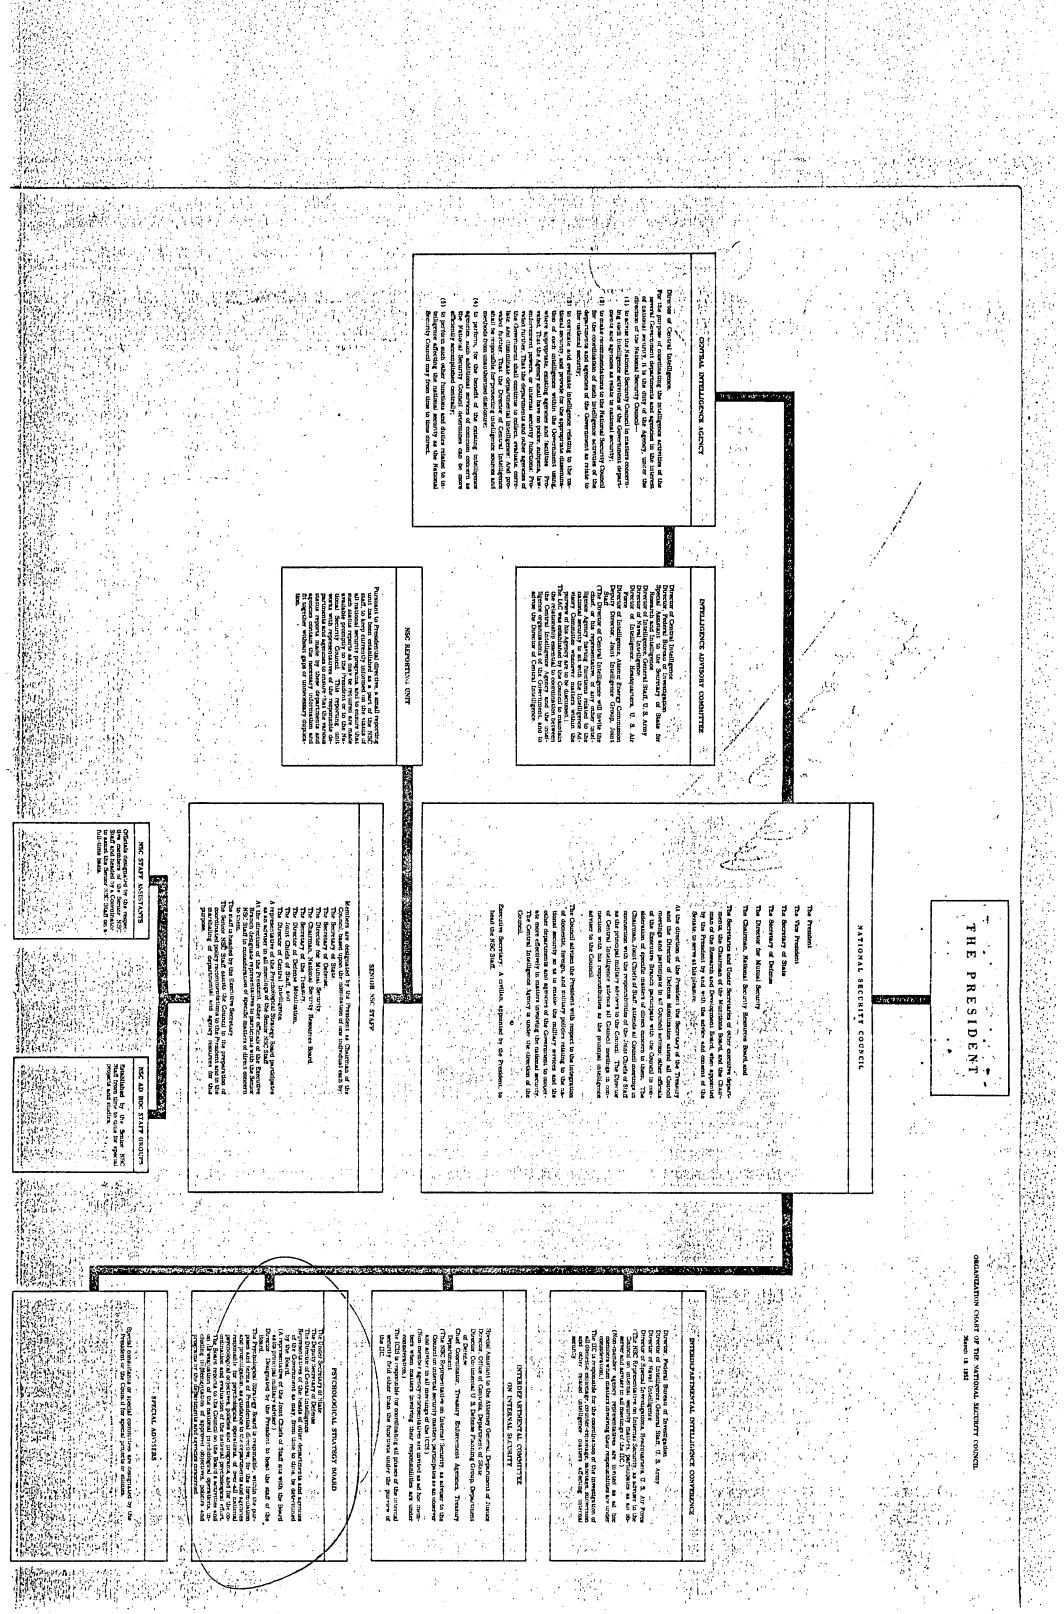

Vitalize the NSC has been carried out. His personal interest and leadership is reflected in the increased attention given to the formulation of national security policies by the other members of the Council. The Staff and the operating machinery of the Council have been strengthened. The key personality, aside from the President himself, is energetic Robert Cutler, the Council's executive officer and chairman of the Planning Board. Significant progress has been made in the submersion of the interests of the member departments into the wider interests of the Council.

The problem of insuring the implementation or execution of national security policies has also received attention. The personnel and other assets of the old Psychological Strategy tation of national security policies. The OCB inherited the Board (PSB). By the end of 1953 the OCB had developed its own procedures and was in the process of organizing working cerned with execution of national security policies. While Operations Coordinating Board (OCB) was created by Executive Order for the purpose of insuring coordinated implemengroups of staff personnel from each of the agencies con-OCB may be contemplating creation of "National Plans," over-all government-wide plans to insure integrated execution of policy, there has been no announcement of intention to take such a broad approach to the problem. Yet, the members of the working groups can hardly insure "comprograms" in the absence of some over-all framework of at least an outline of a National Plan into which each agency pleteness of and mutual support among agency operational can design and fit its own program.

In final analysis, as this critique goes to press, it must be noted that during the first year of the Eisenhower adminis-

WHITE HOUSE STRATEGY-MAKING MACHINERY

whereby our national security policies are formulated. The Cabinet faded in significance before a revitalized NSC. The NSC organization structure was improved and vigorous men appointed to key staff positions. What immediately remains to be done is a similar strengthening of the processes whereby those policies are to be implemented—a comparable improvement in the machinery for achieving coordinated action.

Movember 30, 1955

12-18- 71

Agita lesting of the National Security Council

MEMBERS

> The President of the United States, Presiding

John Foster Dulles, Secretary of State

Charles E. Wilson, Secretary of Defense

Arthur S. Flemming, Director, Office of Defense Mobilization

OTHERS

George M. Humphrey, Secretary of the Treasury

* Herbert Brownell, Jr., the Attorney General X

Rowland R. Hughes, Director, Bureau of the Budget

-- Harold E. Stassen, Special Assistant to the President

> Lewis L. Strauss, Chairman, Atomic Energy Commission

-- Herbert Hoover, Jr., Under Secretary of State

Robert R. Bowie, Assistant Secretary of State

- Reuben B. Robertson, Jr., Deputy Secretary of Defense

-- Charles C. Finucane, Acting Secretary of the Army

Charles S. Thomas, Secretary of the Navy

- Donald A. Quarles, Secretary of the Air Force

Admiral Arthur W. Radford, Chairman, Joint Chiefs of Staff

- Lt. General W. L. Weible, Acting Chief of Staff, U.S. Army

- Admiral Arleigh Burke, Chief of Naval Operations

General Nathan F. Twining, Chief of Staff, U.S. Air Force

General Lemuel C. Shepherd, Jr., Commandant, U.S. Marine Corps

➤ Allen W. Dulles, Director of Central Intelligence

➤ Dillon Anderson, Special Assistant to the President

Joseph M. Dodge, Special Assistant to the President

Nelson Rockefeller, Special Assistant to the President X

- Colonel Andrew Goodpaster, White House Staff Secretary

Robert C. Sprague, NSC Consultant

J. Patrick Coyne, NSC Representative on Internal Security
